Potsdam, Germany | **German B.Sc. graduate, eligible to work in Germany. No visa sponsorship required.**

PROJECTS

Whale Abyss | *Next.js, TypeScript, Tailwind CSS, PostgreSQL, Drizzle ORM, Zustand, NextAuth, Yandex Cloud* Feb 2026 – Aug 2026

- Built and launched a production e-commerce marketplace for gaming services as the sole developer, growing it to **250+ paying customers** and validating both the architecture and the product.
- Owned every layer end to end: Next.js/TypeScript frontend, PostgreSQL data model with Drizzle ORM, authentication, cloud infrastructure, and a CI/CD auto-deploy pipeline.
- Engineered a real-time order automation system over a Telegram Bot with integrated payment processing, giving instant order notifications and a seamless transaction flow.
- Designed the brand identity and UX from scratch, shaping every user-facing layer around onboarding and conversion.

Torq | *Expo, React Native, React 19, TypeScript, NativeWind, Supabase* Jul 2026 – Present

- Building an Android-first workout tracker around a live set logger: start a session, add exercises, log weight and reps set by set, and review duration, set count, and total volume per session.
- Engineered offline-first storage as a local snapshot in AsyncStorage, with optional delta sync to Supabase over JSONB mirror tables using server-stamped versions, last-write-wins resolution, and Row-Level Security.
- Integrated a searchable 1,500-exercise catalog with animated demos and muscle breakdowns, importable alongside custom exercises, plus reusable routines and body measurement tracking.
- Designed a custom clay/bento design system in NativeWind v5 and Tailwind CSS v4, in strict TypeScript.

ClimaNova | *Flutter, Dart, cross-platform mobile* Spring 2024

- Led the mobile team for a cross-platform weather app as part of a university frontend course, coordinating developers end to end, running planning calls, and delegating tasks. Achieved one of the top grades in the course.

EXPERIENCE

Software Engineering Intern Apr 2025 – Aug 2025
intuivo Remote

- Engineered a suite of full-stack applications using Rust (Actix, Sled DB) and TypeScript frameworks including React, Next.js, and Mithril.js, working across backend performance and frontend architecture.
- Built an AI-assisted content management system with LLM-backed generation, robust versioning, export options, and citation handling.
- Integrated secure payment APIs from Stripe, PayPal, and Klarna into proof-of-concept applications, managing third-party services and sensitive financial data.

EDUCATION

University of Europe for Applied Sciences Sep. 2022 – Feb 2026
Bachelor of Science in Software Engineering Potsdam, Germany
Final Grade: 2.0 (Good, German grading scale)

TECHNICAL SKILLS

Programming: TypeScript, JavaScript, Rust, Python, SQL, Dart, HTML/CSS

Frontend: React, Next.js, React Native, Expo, Flutter, Tailwind CSS, Zustand

Backend: Node.js, Nest.js, Actix (Rust), GraphQL, REST APIs

Databases & Cloud: PostgreSQL, MySQL, Supabase, Firebase, Drizzle ORM, AWS (S3, EC2, Lambda)

AI Engineering: LLM API integration (OpenAI, OpenRouter), Vapi AI voice agents, agentic development with Claude Code

Practices: Git, GitHub Actions (CI/CD), monorepo architecture, local-first design

Spoken Languages: English (C1, full degree taught in English), German (A2, improving), Russian (native), Kazakh (native)
